What's New?!

For better understanding a feature, [*GUIDE NAME* | *PAGE NUMBER*] of the current version of guide has been provided after the points (wherever applicable) for the reader to refer to.

- No new features added in this release.

Fixed Issues

- Fixed the issue where a deadlock in the MSSQL database was observed when more than one credential pool was used in a workflow and the number of requests generated was higher than available credentials in the pool.
- Fixed the issue where the same credentials from Credential pool were used by two requests at the same time.
- Fixed the issue where the user was unable to select an Agent from Agent dropdown if the Agent name had a period (.) in it.

Security Fixes/Enhancements

- Upgraded Apache Log4j library to the latest version Log4j 2.17.1 to mitigate few more vulnerabilities. For more information, see **Security Fixes/Enhancements** section in **Release Notes [5.6.9](#)**.

Known Issues / Limitations

- TLSv 1.3 is not supported for AE versions 5.*.*
 - *TLSv 1.3 is supported for AE version 7.1 or later.*
- The Status of Integration Services is displayed as UNKNOWN intermittently (for few seconds), on AutomationEdge UI, although the Service may be running.
- The *Time Zone* option under the *Polling Schedule* section of Integration > Type Configuration menu is disabled. The default time zone of the machine on which integration service is deployed will be used for Polling schedule
- A redundant update status message is displayed for all existing plugins in PS after the *Plugin Sync* operation if any plugin is assigned to or removed from a tenant.
- Copy Query option in Add/Edit Templates in Reports tab on AEUI does not work for IE browser.
- No email notification is sent when a workflow configuration parameter is removed; even after configuring '*Workflow Create and Update*' notification in Settings menu in AEUI
- An incorrect the email notification – 'Parameter is added' instead of 'Parameter is changed' – is sent when the value of a configuration parameter is changed
- While Downloading Requests from AEUI, Created and Completed dates need to be formatted as 'Date' in Microsoft Excel in the downloaded CSV file
- WebGUI workflows must always be marked as sequential. If one of the WebGUI automation workflows running as non-sequential workflow is terminated, then all the subsequent requests remain in *New* state.
- Agents will acquire Tenant level proxy settings (If Any) during upgrades discarding the Agent level proxy settings. The required changes need to be done manually.
- Agent restart features in not supported on Linux based OS
- Agent type cannot be changed when the Agent is in *Unknown* state
- Existing workflows will not open if Process Studio Distribution folder path has any special characters.
- SSO authentication is not supported for users with *Sysadmin* role or users who want to use the Process Studio.
- Support for Process Studio on MacOS has been suspended.
- Desktop/Surface UI Automation is not supported in Linux based OS.
- When adding exceptions in AEUI for *Proxy Server* option, users must ensure the following:
 - No wildcards are used
 - Port numbers are not added along with the host name.
 - Only semicolon (;) is used as separator and spaces are not present in exception Entry
 - Only domain names are used and are not prefixed with www or http://https:.
 - Currently, the list of exceptions entered while downloading the agent is not stored anywhere and needs to be tracked and maintained manually outside the system
